#### we must Activate Debugging on the Device

#### -How to enable USB debugging

In order to activate USB debugging and for our computer to recognize the mobile device, the procedure shown below must be followed:

1.- Enter the Settings option - About device, then we will touch the Build number option 7 times.

2.- Then a message will appear with the legend: You are now a developer!

3.- We will return to the initial screen menu and select Developer Options that now appears on the screen. Within that menu we will select USB Debugging to activate it.

Connect your Device in Developer mode [ADB]
